# **PIZZA DELIVERY SYSTEM**

## **ABSTRACT:**

Our goal is to deliver a database with a user interface (website) where customers can select various ingredients for their own pizza and place their order. The order will be sent to the “kitchen” where the pizza will be made. The focus is to create an “easy to use” website, which will allow a first time customer to complete their order with ease.

## **ACKNOWLEDGEMENT:**

Executing such a project under the guidance of our mentor Sagar Pande, Assistant Professor, Lovely Professional University for giving us a chance to explore new ideas and expand our knowledge on a topic. With such an opportunity, we are thankful to our mentor and other respected persons who are involved in completing this project. We would like to thank everyone involved directly or indirectly in writing the research paper and now this report for our project.

Regards,

1. B.Bharath
2. Nalli Shiva

2. Cancel Order
3. Report

## **INTRODUCTION:**

A pizzeria specialized in custom made pizzas is currently taking orders by phone. The current system where the customer calls the pizzeria takes time of employees to answer the phone and is more work consuming than necessary. They want to allow customers to customize and order their pizzas online. The pizzeria also aims to increase the sales, due to the easy to use order online website. The system will give the employees more time to “work” rather than to accept orders by phone, also the potential increase in customers are enough reason for the pizzeria to accept the change (website where customers can order their customized pizzas).

## **Functional Specifications:**

In this Pizza Delivery System Users would be able to

- Order Pizza
- cancel Their Orders
- Track their Order

And vender would be able to access

- Cancelled Orders
- Served Orders
- Deliverd Orders
- Pending Orders

## **Technical specifications:**

The system is made up of three layers. At the top there is the GUI (Graphical User Interface) layer, the middle layer is the storage and query manager, the bottom layer is the underlying database.

### **GUI layer:**

The GUI layer allows users to access the system. All the functionalities of the system must be available through the GUI. There are two separate GUI's. One is for the customers to create orders and one is for employees for processing orders and administration purposes. With scripts, user input will be used to invoke queries from the storage and query manager layer to provide the user with various pages. The GUI should prevent input errors and in case of errors that could not be prevented, provide clear error messages. Nowadays people have usernames and passwords for a lot of websites and services. It is not practical to have users to remember information for a pizzeria. It is much easier for customers to type in their name and address than to have to remember the username and password. Therefore, customers do not have accounts to log on to. However customer information will be stored into the system to allow employees view previous orders by customers. The GUI for employees is on a separate URL. Users need a username and a password to gain access to the system.

## **Specific Requirements:**

To avoid any kind of disturbances or errors at the time of working, we need to follow some specific requirements.

- Operating System(OS): Windows 7 with SPI; Recommended: Windows 10.
- CPU: Intel or AMD processor with 64-bit support; Recommended: 2.8 GHz or faster processor.
- GPU: nVidia GeForce GTX 1050 or equivalent;  
Recommended: nVidia GeForce GTX 1660 or Quadro T1000
- Disk Storage: 4 GB of free disk space.
- Monitor Resolution : 1280 x 800; Recommended: 1920x1080
- Internet: Internet connection required for software activation.

## **SWOT Analysis:**

## Architecture:

## OUT PUT:

**Fig1:Home page**

### Fig2:Order Pizza

Order Pizza

Name

Address

Pizza Type ☐ Small(95 rs) ☒ Medium(195 rs) ☐ Large(295 rs)

Mobile no

Email id

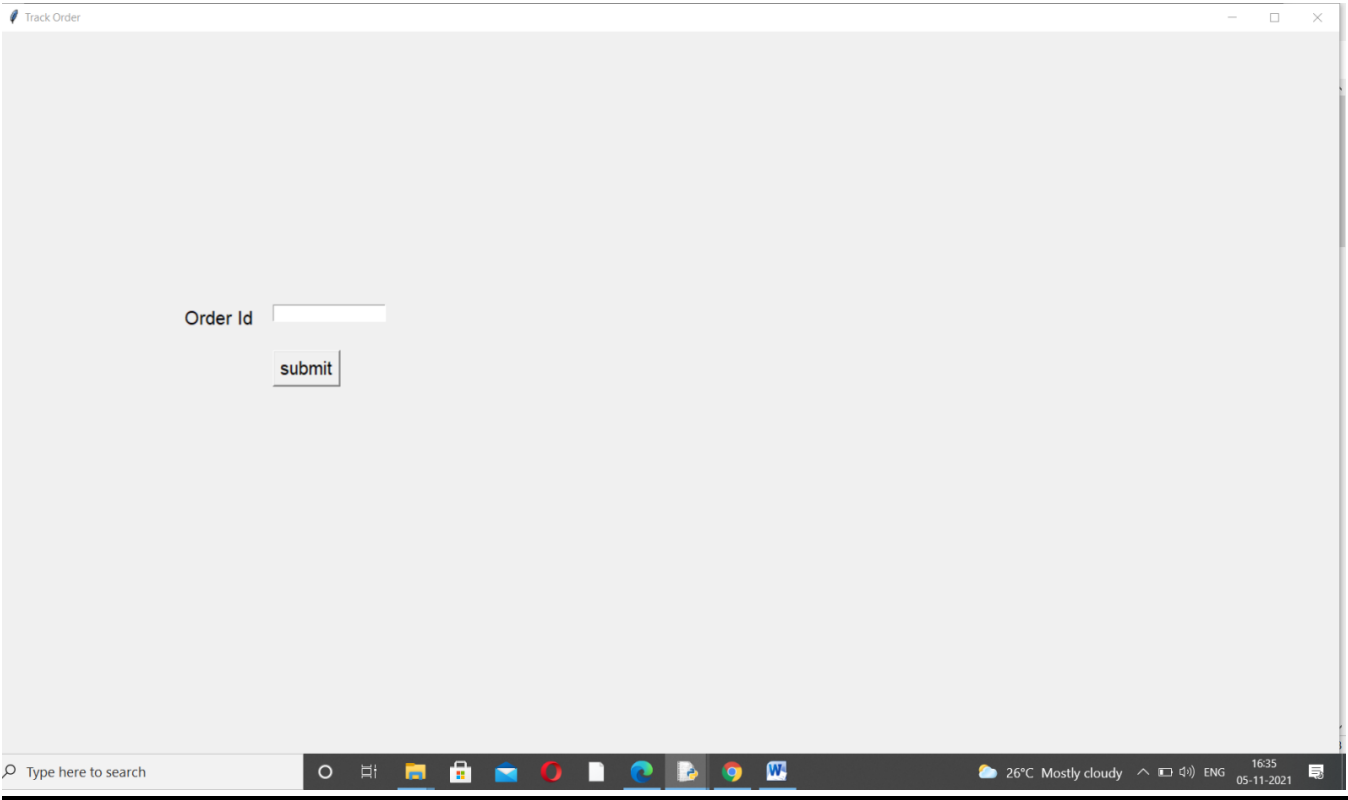

Windows taskbar: Type here to search, 26°C Mostly cloudy, 16:35, 05-11-2021

### Fig3:Cancel Order

The screenshot shows a web browser window with the title "Cancel Order". The address bar displays "http://localhost:3000/". The main content area is a light gray page with a form on the left side. The form consists of two text input fields: the first is labeled "Name" and the second is labeled "Order Id". Below these fields is a button labeled "submit". The Windows taskbar is visible at the bottom of the screen, showing icons for various applications including File Explorer, Mail, and a web browser. The system tray on the right side of the taskbar shows the date and time as "16:35 05-11-2021" and the weather as "26°C Mostly cloudy".
